

Montgomery College Nursing Simulation Library

PPHge CUE SHEET

SIGNIFICANT OTHER

- Wake up when RN enters room, see blood on the floor and begin yelling.
- Be very upset; ask "is she breathing? Oh - thank goodness I see that she's breathing!"
- Throughout the entire scenario, very concerned and upset about your sister, who is bleeding and nonresponsive.

LAB TECH

- Walk into room when called by RN, "draw blood" and ask for one of the nurses to verify T & C label with you.
- A short time after drawing labs, call to report a critical value: hct is 20

HEALTH CARE PROVIDER

- At first call from RN, prompt use of SBAR format if not used. Give orders for stat H&H, T&C, foley insertion and IVF NS I liter bolus. Ask RN to read orders back if not repeated.
- When RN calls to report patient's lab results, say you'll be right there, then walk into scenario and state that the scenario has now ended, the patient's life has been saved and it's time to debrief.
